

Job Description

Job Title: Senior Space Consultant

Role Overview SWG is looking for a Space Consultant to join their Professional Services Team. The successful candidate will support client implementation of our Space products throughout its sales, deployment and ongoing life.

5+ years of knowledge and experience of the space management industry, the ideal candidate will have a good understanding of the typical space management requirements experienced by clients. This would include:

- Pre-sales effort to establish customer requirements and estimate effort required for implementation process
- Pre-sales effort to ensure that client data and drawings are suitable for Our Space product and estimate remedial work where they are not
- Implementation of the system including the provision of:
 - Batch conversion of drawings to meet our Space products specification
 - Importing of data and drawings into our Space products
 - Minor configuration of the product
 - Providing software training to clients

Key skills required:

- 5+ years of industry experience working with AutoCAD software.
- Good ability with manipulating data within Microsoft Excel.
- Ability to create basic MS-SQL statements
- Good overall computer skills
- Experience in managing projects and good awareness of professional project management
- Basic to medium ability with Autodesk, Revit, COBIE or similar drawing packages

Desirable skills:

- Knowledge of Space management standards and practices
- Knowledge or experience of moves management
- Experience implementing similar systems
- Knowledge of BIM desirable but not essential
