## Version Log

Version #	Summary of Revision	Date	Author
1.0	First edition	01/06/2022	MR

## Release Notices

### QFM Compatibility

The QFM v4.01.00.55 release is compatible with the following QFM software:

- **Workflow Scheduler: 4.01.00.02**
- **Mobile App: 4.00.00**
- **Mobile Server 4.00.00.00**
- **Desktop Version: 164.08.09**

In order for this release to perform at an optimum level, Service Works strongly recommends that client organisations upgrade to these software versions or later.

### Security

Maintaining high levels of software security continues to be a high priority for Service works. Combined with our ISO27001 information security management accreditation this provides our clients and service partners with the confidence that their data will be managed securely.

Therefore, it is a requirement that QFM versions 3.1 or higher must use an SSL certified environment (this includes the Web, Workflow Scheduler, Mobile Server). In addition, support for non-SSL from the QFM Mobile app will be depreciated in future app release versions.

### Crystal Reports

Please note that clients wishing to upgrade to v3.00.01.37 and above will be required to upgrade Crystal Runtime to 13.0.27. For users with multiple installations on the same machine, all instances will require an upgrade to v3.00.01.37. Please speak to your SWG Account Manager to discuss specific requirements or to raise any concerns.

Additionally, clients who wish to upgrade to 64bit will also require all custom Crystal Reports to be updated. SWG will upgrade all standard reports within the core product and provide clear directions to users who have additional custom reports not maintained by SWG.

Furthermore, whilst 32bit does not currently require Crystal Reports to be upgraded, it is recommended that Crystal Reports which use TTX are upgraded, as these are no longer supported by SAP and SWG cannot guarantee future 32bit runtimes will be backward compatible.

## New Features Summary

The QFM v4.01.00.55 release includes a range of new features. A summary is provided below, with further details on the following page.

### [Event Type Data Scoping](#)

Data Scoping Filters can now be applied on Event Type by User Class. This provides a wider set of options for applying Event related restrictions, i.e. the types of Event that a particular class of users are able to access can now be controlled. Restrictions are applied throughout QFM where Events and related records are used.

### [Additional Flexible Event Characteristic Fields](#)

Support for an optional additional 6 'Characteristic' fields is added to the Event and supporting screens. These follow same implementation as Event Characteristics 1 - 5 on the Event screen. They may be configured to be shown/hidden/updatable/mandatory to different users for different Event Types and States via the Workflow configuration associated with an Event Type. As per the other Characteristics, these may be set up to be look-up or free typed and may be relabelled as per other controls. These are intended to provide clients with improved support for capturing bespoke Event data which may be of interest.

**Note:** This is an advanced configuration feature which must be carried out by trained SWG staff.

A new Import/Export is available for maintaining all characteristics 1 - 11.

### [Document Viewer Enhancements](#)

The Event Document Viewer has been enhanced with improvements to data and view/filtering functionality available. It has also been enhanced to show Asset related documents. The documents shown now respect 'Event', 'Asset', 'Client contract' and 'Editor Workgroup' data scoping.

### [Enhanced Event Director Filtering](#)

Additional filter conditions are added to the Event Director to allow users to search in Instructions or for jobs assigned to them. These new filters are persisted with saved views for easy retrieval of key information of interest.

### [Permit To Work Enhancements](#)

This module has been extended to support the maintenance of dependencies between Hazards and associated Risks, Equipment and Required Documentation. If set up, then these are added to Work Permits as Hazards are identified.

Permit reporting has been enhanced to include these new inclusions and also to contain optional configurable blocks of text for areas such as 'Acknowledgement' and 'Sign-off' sections.

### [Stock Enhancements](#)

The usage of Adhoc Parts has been enhanced to differentiate between 'Stocked' and 'Non-Stocked' Adhoc parts. When users use a Non-Stocked Adhoc part they are forced to provide a custom description of the Part. When using a 'Stocked' Adhoc Part then the catalogue description is used. In both cases, the system does not keep a stock count of these 'Adhoc' Parts.

The Part Description has been extended to allow up to 260 characters (limitations and restrictions apply).

The control around when a web requisition may be viewed/edited by a user has been improved, so it may now be managed by the Workflow configuration. It may be controlled by User Grouping/Event Status/Event Type.

**Note:** This is an advanced configuration feature which must be carried out by trained SWG staff.

#### [Extended Data Available for Dynamic Forms Reporting](#)

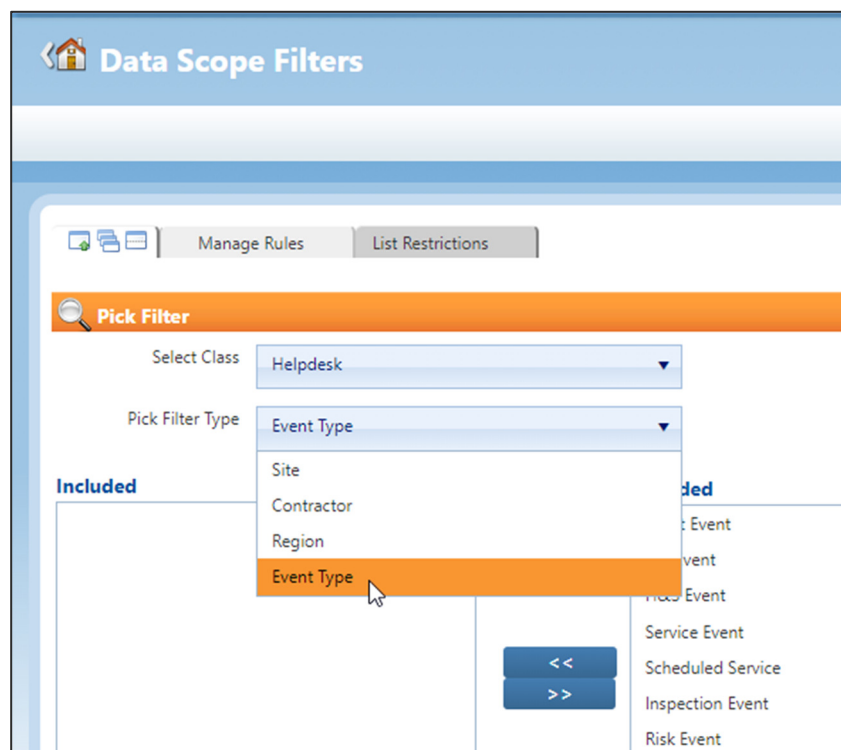

The system has been enhanced to make more Event/Visit/Asset based information available, to be referenced on customised Dynamic Form and Survey Reports.

## Event Type Data Scoping

### Overview

Data Scoping Filters can now be applied by Event Type. This provides a wider set of options for applying Event related restrictions, i.e. the types of Event that a particular group of users are able to access can now be controlled.

Restrictions can be applied throughout QFM where Events and related records are used.

Features and benefits include:

- Broadens the options for applying Data Scoping restrictions, so that these can now be applied by type of Event.

## Introduction

Data Scoping Filters enable administrators to apply certain data restrictions within QFM. Restrictions can be applied by Site, Contractor, Region and now Event Type. This means that you can restrict the types of Event that a particular group of users are able to access.

Filters are applied by User Class and are used to control which categories of data the users belonging to the User Class, are able to access. By using this screen, for example, you can ensure that a particular contractor with access to QFM (with their own User Class) only has access to the Event records that they are assigned.

Data Scoping is available at; Admin > Users & Profiles > Data Scoping Filters.

**Data Scope Filters**

Manage Rules | List Restrictions

**Pick Filter**

Select Class: Administrator Class

Pick Filter Type: Event Type

**Included**

- Asset Event
- Service Event

**Excluded**

- Event
- Scheduled Service
- Inspection Event
- Risk Event
- Survey Event
- Admin Event
- Room Audit
- Quote (Asset)
- Quote (Service)
- Incident Event

<< >>

This screen allows you to restrict access to QFM Web data so that users can only view and create records for specific sites, contractors or regions. Use the arrow buttons to move highlighted options into Included / Excluded for the selected User Class. Moving everything into Excluded means no restrictions are set and everything is deemed Included. Changes are applied on 'Refresh'.

**Refresh**

Data Scope filtering by Event Type is now available across a wide range of key QFM areas, including:

- **Report Centre**
- **Event Director**
- **Find Events**
- **Events**
- **Resource Scheduler**
- **Batch Actions**
- **Works Mapper**
- **Link Events**
- **Event Sub-Tasks and Related Events**
- **Site Explorer**
- **'My Home' screen**
- **Dynamic Report Lists**

**Note:** Existing Dynamic Forms DO NOT respect Event Type Data Scoping.  
New Dynamic Forms (created from this release onwards) DO respect Event Type Data Scoping.

- **Report Centre Lists**

**Note:** The 'Events' and 'Visits' List Reports DO respect Event Type Data Scoping.  
The 'Events (ALL)' and 'Visits (ALL)' List Reports DO NOT respect Event Type Data Scoping.

**Notes:** In all cases where this is supported, if a User Class has not been configured to see a particular Event Type, then users attached to the User Class will not see the Event Type in lists or reports, or as linked sub-tasks.

Data Scoping is not implemented on the Wizard Tile configuration.

## Additional Flexible Event Characteristic Fields

### Introduction

Six additional 'Characteristic' fields are added to the Event screen, to make 11 in total. These provide greater flexibility, as the labels are user-configurable and values entered can be validated from customised lookup lists or enabled for free text. This enhances the ability to capture bespoke data.

Administrators can maintain Lookup values via the Import/Export utility and the option for free type text is available from General Settings.

'Characteristic' fields can be enabled/disabled for different stages in Event workflow (refer to your SWG Account Manager for further details).

The screenshot displays the 'New Service Event' form in the QFM software interface. The form is organized into several sections with tabs at the top: Details, Key Dates, Related Assets, Contractor, and Costs. The 'Details' tab is active. The form contains various input fields for event information, including Event Type, Reported By, Site, Location, Unit, Partition, On Behalf Of, Service Group, Service, Work Type, Priority, PO Number, Assigned To, Estimated Cost, Chargeable, Authorised By, Allocation Code, and Cost Code. At the bottom, there are buttons for 'Submit', 'Submit and Notify', 'Reset Fields', and a checkbox for 'Suppress Notifications'. Sixteen 'Characteristic' fields are present, numbered 1 through 11. These fields are arranged in three columns: Characteristics 1-5 on the right, Characteristics 6-8 in the middle, and Characteristics 9-11 on the left. Each characteristic field is a dropdown menu. Red rectangular boxes highlight each of the 11 characteristic fields, indicating they are the focus of the update.

## Import/Export

The new Import/Export screen 'Events - Maintain Event Characteristics' enables you to add and maintain Lookup values for the Event Characteristic 1 - 11 fields.

The screen is available to administrators at; Administration > Manage > Import/Export.

The screenshot shows the 'Import/Export' screen for 'Events - Maintain Event Characteristics'. The interface includes a navigation bar at the top with links to Events, Assets, People, Places, Stock, System, Bookings, Service Audits, Event Audits, Room Audits, Administration, Logout, Help, and Mark Rumble. Below the navigation bar, there is a header section with the 'Import/Export' title and a QFM logo. A warning message states: 'Please ensure that you have read and understand the Release Notes around this area before using this feature.' Below this, there are dropdown menus for 'Events - Maintain Event Characteristics' and 'Export'. A 'Comma' dropdown and an 'Export' button are also visible. The main section is titled 'Results' and contains a table with the following data:

CharacteristicNo	UniqueID	Name	LookupOrder	Active Version
8	10058	Char_1_Val_11	2	<input checked="" type="checkbox"/>
9	10059	Char_1_Val_12	1	<input checked="" type="checkbox"/>
9	10060	Char_1_Val_13	2	<input checked="" type="checkbox"/>
10	10061	Char_1_Val_14	1	<input checked="" type="checkbox"/>
10	10062	Char_1_Val_15	2	<input checked="" type="checkbox"/>
11	10063	High	1	<input checked="" type="checkbox"/>
11	10064	Medium	2	<input checked="" type="checkbox"/>
11	10070	Low	3	<input checked="" type="checkbox"/>
11	10071	Low	4	<input checked="" type="checkbox"/>

At the bottom of the screen, there is a footer with the text 'Powered by QFM Technology', 'Licence information', and 'Copyright 2022 Service Works Global'.

Available fields are as follows:

- Characteristic No**  
 The Characteristic field (1 - 11) to which the Lookup item will be attached.
- Unique ID**  
 A Unique Identifier for the Lookup item.
- Name**  
 Name of the Lookup item, as it will appear in the lookup list.
- Lookup Order**  
 The order in which the Lookup item will appear in the list, (1 = top).
- Active Version**  
 Enables deactivation of a Lookup item without removing the entry.

## Event Director

Characteristic fields 6 - 11 are available to include as columns in Event Director, (in addition to the existing Characteristic 1 - 5 fields).

## Document Viewer Enhancements

### Overview

Improvements have been made to the existing Document Viewer for Events, including more information, filtering and search options. It has also been extended to show Asset based Documents.

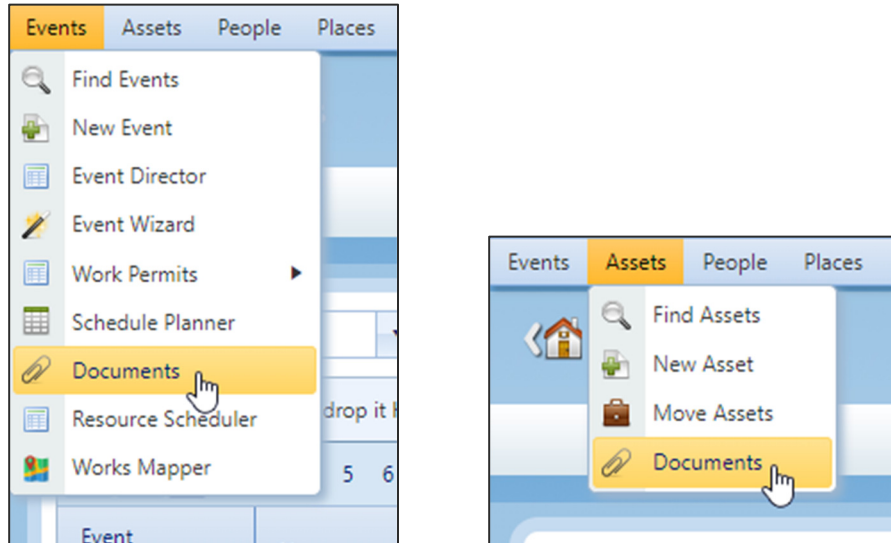

Features and benefits include:

- Document Viewer now extended to show more Asset information where it is relevant.
- Improved facilities for document searching and filtering (including quick searching).
- Option to switch between Asset based documentation and Event based documentation.
- Respect for Event, Asset, Client Contract and Editor Workgroup Data Scoping.
- Small improvements to Event and Asset Hover Menus so they list the last 5 attachments added and also allow users to Add and View attachments.

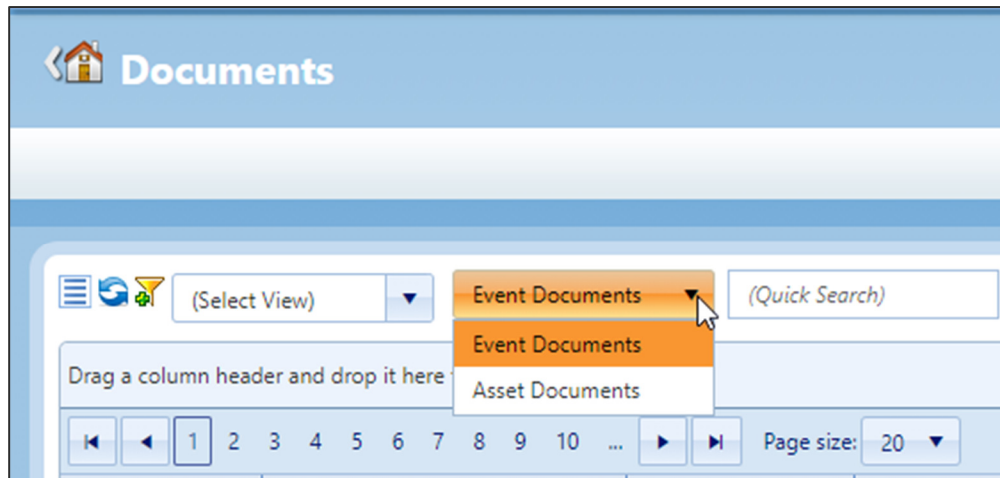

## Introduction

QFM now includes a new option on the Document Viewer to show Asset based attachments. Improvements are also made to extend Asset based information shown and the associated filtering.

Document Viewers are available from the Event and Asset menus. This opens the Document Viewer in the appropriate mode (but users are then able to switch).

Both the Event and Asset Document Viewers feature a toggle option which enables you to switch between Event and Asset attachment views.

**Note:** Access to both Document Viewers is controlled by the General Setting 'Allow to Access Document Viewer' (Attachments section).

## Document Viewer (Event Mode)

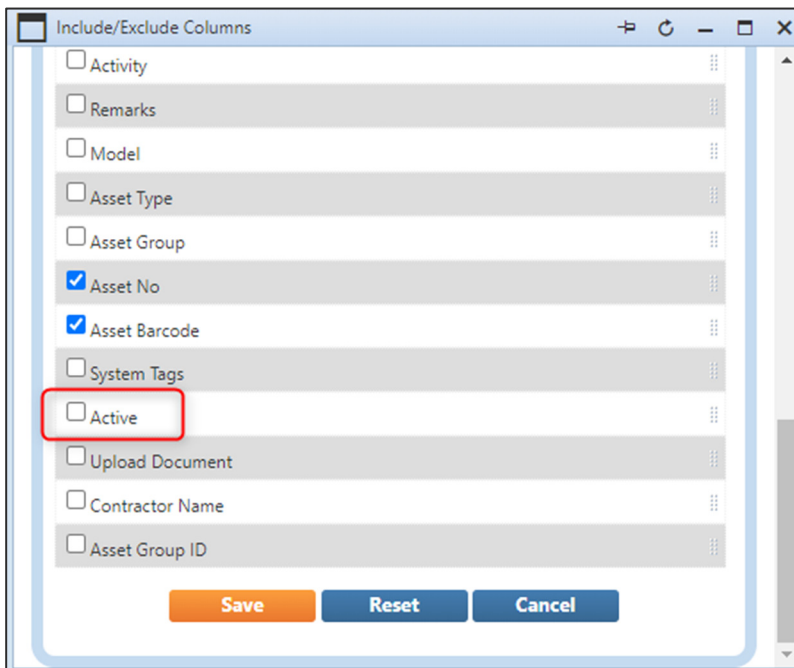

A number of improvements are made to the Document Viewer when showing Event based documents.

- A toggle option is added, enabling you to switch between Event and Asset attachment modes without having to leave the screen.

- A 'Quick Search' is added. This allows searches against 'Event Reference', 'Asset No', 'Name', 'Metadata', 'Equipment ID', 'Remarks' and 'Barcode Reference'. Wildcard (\*) searching is supported.
- An 'Active Only' tick box shows only those documents associated with open Events.
- Layout filtering now includes the option to filter on Active (open) Events.

- Data Scoping is enabled, i.e. Document Viewer only shows those documents for Events which the user has the rights to see.

- New columns for 'Asset No' and 'Asset Barcode' are added, (for Assets related to Events). The 'Asset No' includes a link to the Asset record.

3595 items in 180 pages

## Enhancements to Event Director Filtering

### Introduction

Two additional filter conditions are added to the Event Director:

- **Assigned to me**  
Selects only those Events assigned to the user logged in.
- **Instructions**  
Allows search text to be entered on Event Instructions. Wildcard (\*) searching is supported.

The screenshot shows the 'Event Director - default \*' interface. At the top, there's a navigation bar with links like Events, Assets, People, Places, Stock, System, Bookings, Service Audits, Event Audits, Room Audits, Administration, Logout, and Help. Below this is a toolbar with buttons like 'Select View', 'default \*', 'Remove View', 'Save View', 'Refresh', 'Change Filter', 'Reset View', and 'Interval: 10 Minutes'. The main content area is titled 'Event List' and includes a search bar with the text 'Only show latest escalations and Only show active Events and Day Type is Reported and Max Days Back is 90 and Max Days Forward is 180'. Below the search bar are several status indicators: 'Overdue 105 637', 'Due 0 5', 'Pending 33 211', and 'OK 238 415'. The 'Filter Conditions' section is highlighted in orange and contains various filters. The 'Event Types' dropdown is set to 'Admin Event'. The 'Status' dropdown is set to 'Express Events'. The 'Escalation' dropdown is set to 'OK'. The 'Instructions' field is highlighted with a red box and contains the text '(Enter Search Text)'. The 'Day Type' dropdown is set to 'Reported'. The 'Max Days Back' field is set to '90'. The 'Max Days Forward' field is set to '180'. The 'Assigned to me' checkbox is highlighted with a red box and is currently unchecked. The 'Only show latest escalations' checkbox is checked. At the bottom, there's a table with columns like 'Changed', 'Event ID', 'Alert', 'Status', 'Alert Level', 'Next Action Time', 'Next Warning Time', 'Count Down Mins', 'Contractor', 'Operative', 'Priority Code', 'Priority', 'Service Group', 'Service', and 'Watch Date'.

These settings are persisted with the saved 'Views', making it much easier to set up shared 'Views' to reflect Events which the current user needs to handle.

In both cases, it is recommended to use these filters together with other conditions to narrow down the scope of the search.

## Permit To Work Enhancements

### Overview

This module has been extended to support maintenance dependencies between Hazards and associated Risks, Equipment and Required Documentation.

If dependencies are set up, these linked inclusions are added to a Work Permit as Hazards are identified on the Permit.

The inclusions (Hazards, Risks, Equipment and Required Documents) have been extended to include an optional 'Short Code' for each. This is used when importing dependent inclusions against a Hazard.

The reporting has been enhanced to include the new inclusions and also to contain optional configurable blocks of text for areas such as 'Acknowledgement' and 'Sign-off' sections.

Features and benefits include:

- By setting up pre-defined Documents, Risks and Equipment against known Hazards, the Permit will be automatically populated with relevant information once the 'Hazards' are identified.
- The extra Inclusions; 'Risks' and 'Required Documentation' are available for the Approving Party to double-check against the content of the Permit before they authorise.
- The new document sections provide clients with a way to insert their own preferred text/sign-off block for these key sections.

### Setting up Inclusions with Short Codes and Links

Two new columns have been added to the Import/Export utility 'Work Permit - Maintain Work Permit Inclusions'; **Short Code** and **Linked Inclusions**.

433 items in 18 pages

Powered by QFM Technology Licence Information Copyright 2022 Service Works Global

- **Short Codes** are used to provide a quick method of referencing a specific inclusion, when linking.
- The **Linked Inclusions** column is used to show/update the list of inclusions associated with a 'Hazard' type inclusion.

Using the Import/Export to Link Inclusions:

- It is possible to link Risks, Documents and Equipment type of Inclusions to Hazards using the Import/Export utility. If practical, the inclusions to be linked should be first given a meaningful unique Short Code.
- Once inclusions have a unique Short Code, it is possible to link one or more to a Hazard by supplying a semi-colon delimited list of Short Codes.

## Changes to Permit UI to Link Risks and Required Documents

Two new sections are added to the Permit To Work Report; for 'Required Documentation' and 'Risks'.

- Any Documents associated with the identified Hazards are listed in the 'Required Documentation' section.
- Any Risks associated with the identified Hazards are listed in the 'Risks' section.
- The existing section for 'Equipment' now includes any additional Equipment associated with the identified 'Hazards' which are not already linked manually.

Submit for Approval Select Go

Update Mode

SWG recommends the items in the Additional tab are added after the initial Permit is Created. (This is set as the default, but can be changed if required).

If linked inclusions are set up, once the 'Related Hazard' is selected any linked Equipment, Risks and Documents will be populated.

**Notes:** The linked inclusion fields must be available on screen for the inclusions to be added, i.e. if any of these items are not available to a user (as determined by their User Profile) then they will not be added to the Permit.

If a Hazard is removed, any linked inclusions will not be automatically removed. They must be manually removed.

SWG recommends that users validate all inclusions before submitting, to ensure they are appropriate.

## Changes to Permit Report

The Permit Report now shows the new Inclusions; 'Required Documents' and 'Associated Risks'. It also contains optional 'Acknowledgement' and 'Sign Off' sections.

<b>Hazards:</b>	<b>Equipment:</b> Body suites / overalls - If Applicable, Dust masks - If Applicable, Eye protection - If Applicable, Test of adding an item - manually
<b>Required Documents:</b>	<b>Associated Risks:</b>
<b>Acknowledgement:</b> All workers will be provided with and will wear Personal Protective Equipment (PPE) for the duration of the work conducted. Supervision will be always present and any required signage used during the work will be removed upon completion. I am aware of all company procedures and the penalties for non-conformance including the immediate suspension/stop of work among other penalties. I understand my rights to view relevant records and legislation pertaining to any potentially toxic materials or harmful physical agents. If I, or anyone in my team, have not received training on the safe handling of a specific substance, I agree to advise my supervisor immediately.	
<b>Sign Off:</b> As the person in charge of the work, I confirm that I have read and understand the contents of the procedures related to PTW. I confirm that the above location has been assessed and all safety precautions have been or will be taken to control all potential risks and hazards, both to members of the public and works team. I agree to actively partake in the efforts established to maintain a safe and healthy workplace. I understand my right to refuse to perform work that would violate any occupational safety or health standard without jeopardising my employment.	

The default Report does not include the 'Acknowledgement' and 'Sign Off' sections. These can be included if required, and the content text can be changed (via the HTML Template) to suit requirements. There is also a version available with 'Signature' and 'Date', designed to be printed.

<b>Required Documents:</b>	<b>Associated Risks:</b>
<p><b>Acknowledgement:</b></p> <p>All workers will be provided with and will wear Personal Protective Equipment (PPE) for the duration of the work conducted. Supervision will be always present and any required signage used during the work will be removed upon completion. I am aware of all company procedures and the penalties for non-conformance including the immediate suspension/stop of work among other penalties. I understand my rights to view relevant records and legislation pertaining to any potentially toxic materials or harmful physical agents. If I, or anyone in my team, have not received training on the safe handling of a specific substance, I agree to advise my supervisor immediately.</p>	
<p><b>Sign Off:</b></p> <p>As the person in charge of the work, I confirm that I have read and understand the contents of the procedures related to PTW. I confirm that the above location has been assessed and all safety precautions have been or will be taken to control all potential risks and hazards, both to members of the public and works team. I agree to actively partake in the efforts established to maintain a safe and healthy workplace. I understand my right to refuse to perform work that would violate any occupational safety or health standard without jeopardising my employment.</p>

For more information about these Permit To Work Report enhancements, contact your SWG Account Manager.

## Stock Enhancements

### Introduction

A number of minor enhancements are made to stock, as follows.

- The size of Part Description field is increased.
- Change in behaviour around the usage of Stocked/Non-Stocked Adhoc Parts (affects the Parts screen, Parts Import/Export, Stock Import/Export and Web requisitions).
- Ability to limit when a user may see or update Part Requisition information on QFM Web.

**Note:** Changes to Adhoc Part functionality mean that it is important for any existing clients who are using Adhoc Parts functionality from v3.3 or later; when upgrading to 4.1 will need to update the Adhoc Part records to 'Non-Stock Part' to retain existing functionality.

### Part Description Field Size Increased

The Part 'Description' field is now increased to 260 characters, throughout QFM Web for clients who cannot function with shorter descriptions. This affects the Parts screen and the various Lists and Lookups. It is provided only for those clients who are not using Stock on the QFM Desktop system.

### Part Screen

When adding/editing Parts, users are now able to set the 'Non-Stock Part' indicator for an 'Adhoc' Part.

The screenshot shows the 'Add New Part' form in QFM Web. The form is titled 'Add New Part' and has a blue header. It contains several input fields: 'Part Type' (set to 'Adhoc'), 'Part Category', 'Part Number', 'End Date', 'Description', 'Metadata', 'Messages', 'Remarks', and 'Show Messages'. There are also checkboxes for 'Non-Stock Part', 'Modify Price on Request', 'Modify Price on Allocate', and 'Price Required on use'. The 'Save' and 'Close' buttons are at the bottom.

## Part Requisition Screen

When requesting an 'Adhoc' Part, the system no longer requires a 'Description' to be entered if the Part is stocked (i.e. not marked as a 'Non Stocked Part'). Additional changes have been made so that the system does not manage or show Stock quantities for these Adhoc parts. These changes make Adhoc Parts a good choice for scenarios such as recording Adhoc items purchased from a shop for a specific Event, or as a way to have some standard non-stock items, such as consumables which only need quantities and/or costs, to be supplied on use.

Refer to the examples below.

**Add Part(s)**

Part Category: Adhoc & Unidentified

Warehouse: ROSE1 (ROSE1 Stock Room 1)

Part: Circuit Breaker

Request Type: ☐ Requested ☐ Allocated ☐ Used

Quantity:

Unit Price: £10.00

Tax: S-Standard Rate (20.00%)

Total:

Remarks:

☐ Keep Adding

Stocked Part

**Add Part(s)**

Part Category: Adhoc & Unidentified

Warehouse: ROSE1 (ROSE1 Stock Room 1)

Part: Adhoc Part

Description:

Request Type: ☐ Requested ☐ Allocated ☐ Used

Quantity:

Unit Price:

Tax: S-Standard Rate (20.00%)

Total:

Remarks:

☐ Keep Adding

Non-Stocked Part

## Limiting Control Over Web Requisitions

A new Workflow attribute 'WebParts' is created to provide control over the ability to update Part requisitions, at different Event Statuses.

There is no change to existing default functionality, however the option to apply restrictions by Event Status is available. For example, the system could be set so that Parts cannot be updated at Event 'Started' status and beyond.

**Note:** Workflow configuration is considered a specialist task which should only be carried out by trained SWG personnel. Please contact your SWG Account Manager for further information.

## Extended Data Available for Dynamic Forms Reporting

### Overview

Dynamic Forms may be associated with their own Custom Report Template (existing feature). The data properties available to include on the reports have been extended so clients may reference more contextual information. The information available relates to the 'Based On' entity. For example, if a form is based on a 'Visit' then it may be able to access more information from the specific Visit or related Event.

For more information contact your SWG Account Manager.

Features and benefits include:

- More configurable entity related data can be added to Dynamic Form Reports.

## Minor Enhancements and Changes

The v4.01.00.55 release addresses issues highlighted in the product. Details are as follows:

SWG Reference	Description
33877	Events - when the 'Instructions' field is updated, the new comment is now added on a new line and no longer appended to the existing data.
39354	QFM Web has been adjusted to allow contractor names to be up to 100 characters, for clients who are obliged to use long names. The use of these longer names is not supported on the QFM Desktop system. Using names longer than 50 characters should be avoided by clients who are still using the QFM Desktop system. Usage of longer contractor names is generally discouraged, as it affects the display in some areas, giving a below-optimal user experience.
40048	Warehouse Rights - the multi-select feature does not work well with the content filtering feature of the 'Warehouse' field drop-down. To use simple filtering, characters may be entered and one or more matches from the filtered results can be selected. However, if there were already some items selected prior to doing this then those items are still considered selected. It is advised to use the 'Check All' check box to unselect all items before making use of content filtering options.
40052	Events - issues affecting the 'Billing Contract' field are now resolved. Filtering is now applied to the Contractor Name and the drop-down content is now clearly displayed.

## Known Issues

This section details system issues which are identified in v4.01.00.55. These will be rectified at the earliest opportunity.

Please contact your SWG Account Manager for further details.

SWG Reference	Description
39354	QFM Web has been adjusted to allow contractor names to be up to 100 characters, for clients who are obliged to use long names. The use of these longer names is not supported on the QFM Desktop system. Using names longer than 50 characters should be avoided by clients who are still using the QFM Desktop system. Usage of longer contractor names is generally discouraged, as it affects the display in some areas, giving a below-optimal user experience.
40048	Warehouse Rights - the multi-select feature does not work well with the content filtering feature of the 'Warehouse' field drop-down. To use simple filtering, characters may be entered and one or more matches from the filtered results can be selected. However, if there were already some items selected prior to doing this then those items are still considered selected. It is advised to use the 'Check All' check box to unselect all items before making use of content filtering options.
41882	Stock Parts - When updating the 'Request Type' or 'Use Later' option for a Used Part record, users should ensure they manually clear the 'Used Quantity' value before they change the 'Request Type' and save the updated Requisition row.
41901	New Event screen - the 'Equipment ID' field value may not be retained in the drop-down after selection in some cases where Structural Code is used. Users can simply reselect the Equipment ID.

## QFM Installation Notices

This release is compatible with QFM Desktop 164 versions only.

Service Works Global (SWG) does not recommend QFM is run with Internet Explorer 6, 7 or 8 browsers. Use of these lower specification browsers may result in users experiencing unstable operation, script, rendering and performance issues. SWG has no current plan to address these issues.

The Workflow Scheduler is a mandatory requirement in order to run this QFM release, as it performs essential background tasks.

It is requirement for any versions of QFM that are 3.1 or higher must use an SSL certified environment (this includes the Web, Workflow Scheduler, Mobile Server). In addition support for non-SSL from the QFM Mobile app will be depreciated in future app release versions.

From version 3.0.3 onward the secure flag for cookies will be enabled by default. Please be aware that if your system uses HTTP rather than HTTPS this setting may need to be disabled.

SWG is not responsible for user defined reports and should a client upgrade from a non-time zone database to a time zone enabled database it is likely that their user defined reports will be affected as all times and dates will be relative to UTC not local time.

SWG strongly recommends clients review all reports against an upgraded database before relying on the output.

It is the responsibility of the client to ensure any issues are addressed, however Service Works Global may provide consultancy at the standard rates specified in the Customer Order to help the process should this be required by a client.

Please contact your SWG account manager if you need to make use of this service.

QFM includes SAP Crystal Reports runtime environment to enable users to benefit from integrated web based reporting. Clients should refer to the SAP website ([www.sap.com](http://www.sap.com)) to understand the full strengths and capabilities of the product. SWG will make best endeavours to help support and resolve any issues that arise in this environment but as it is a third party product SWG does not provide any warranties over its abilities or functionality. SWG will aim to implement new patches to this software as they become available and are viewed as stable. It is the client's responsibility to ensure that any bespoke user reports work within the environment provided. Furthermore, extensive concurrent use of reporting within QFM can negatively impact the performance experienced by interactive users. This should be monitored and controlled accordingly.

Please note that clients wishing to upgrade to v3.00.01.37 and above will be required to upgrade Crystal Runtime to 13.0.27. For users with multiple installations on the same machine, all instances will require an upgrade to v3.00.01.37. Please speak to your SWG Account Manager to discuss specific requirements or to raise any concerns. Additionally, clients who wish to upgrade to 64bit will also require all custom Crystal Reports to be updated. SWG will upgrade all standard reports within the core product and provide clear directions to users who have additional custom reports not maintained by SWG.

Furthermore, whilst 32bit does not currently require Crystal Reports to be upgraded, it is recommended that Crystal Reports which use TTX are upgraded, as these are no longer supported by SAP and SWG cannot guarantee future 32bit runtimes will be backward compatible.

QFM utilises some 3<sup>rd</sup> party components, as listed below, in order to provide extended functionality. Use of these products may be subject to separate license agreements with the specific vendors/service providers. Use of these 3<sup>rd</sup> party components is not covered under the QFM licensing agreement with SWG. It is the client's responsibility to ensure that they have up to date licensing for these specific 3<sup>rd</sup> party products before they are used within the QFM product.

Crystal Reports (<http://www.sap.com/uk/solutions/sap-crystal-solutions/query-reporting-analysis/sapcrystalreports/licensing/index.epx>)

Google maps (<https://developers.google.com/maps/licensing>) (a business license may apply)

QFM is designed to be run on a range of devices such as tablets and smartphones. These devices may have little or no native support for certain features such as printing, Skype, Facetime, Telephony, etc. QFM does not limit the use of these features but their use is not supported under the standard QFM license agreement.

Please note that support for some Self Service user profile settings has changed. A default value of zero is no longer supported for the following administration settings applied to the Self Service user profile:

- Priority
- Worktype
- Service
- Service Group

Users with a Self Service profile will no longer be able to save events if their default values have not been updated. Client organisations upgrading to version 1.29 onwards should check these Self Service default settings to ensure they have a value other than '0', as '0' is no longer supported.

Users who use Self Service express event logging should validate that the process is unaffected. If any issues are encountered, users simply need to check the aforementioned settings and replace any values of '0'.

Deploying QFM to the root of the Web site is not a supported configuration. It should be deployed as an Application in a virtual folder referenced from the root site.

Please note that when completing Upgrades for QFM Web 3.3 and above it will be necessary to upgrade web features by selecting the 'Update Web Features' button located directly beneath the 'Update Database' button on the QFM Web Upgrade screen. This button is to be selected once the 'Update Database' process has finished. This function will update web features, such as republishing Dynamic Forms and associated tables.

**SQL 2019:** Any clients who are utilising SQL 2019 need to ensure that their database compatibility version is set to SQL 2012 to prevent potential issues occurring when using QFM.
